SKILLS & COMPETENCIES

- HTML, CSS
- JavaScript, React
- C#, .Net
- Git and GitHub
- JSON server
- SQL

PERSONAL BACKGROUND

Software developer with a masters degree in classical guitar performance. Dedicated, passionate, and creative professional committed to growth within myself and my team.

ACADEMIC PROFILE

NASHVILLE SOFTWARE SCHOOL

Fullstack web development.

• February - August 2021.

UNIVERSITY OF DENVER

Master of Music, Classical Guitar Performance

MIDDLE TENNESSEE STATE UNIVERSITY

Bachelors of Music, Classical Guitar Performance

WORK EXPERIENCE

NASHVILLE SOFTWARE SCHOOL

February - August 2021

- Developed dynamic single-page applications using React in addition to modern ES6+ JavaScript
- Learned fundamentals such as HTML, CSS, JSON, modular code, reusable components, database structure and using Entity Relationship Diagrams
- Exposed to an Agile environment through frequent group projects including daily stand ups, planning, ticket assignments, and problem solving
- Used Github to perform and review pull requests to ensure working code free of merge conflicts
- Used C# and .net fundamentals to create server-side applications

PROJECTS

[ShowPlay](#) is an application designed for touring musicians, athletes, and businessmen/women who frequently travel to the same cities for work. It allows the user to keep track of the unique places they visit in a specific location and save details related to the event for future reference.

- A single-page CRUD app built in React with a flat data structure in JSON server
- React Router was used to dynamically route users to add and detail pages to conditionally render content based on the type of fetch call
- Fetch calls to the database were used to store the user's batch information and dynamically populate options for locations and event detail

[Golden Guitars](#) is an application designed for my guitar business that will allow my business partner, contractor, and myself to stay on task with our current projects. Users of the application will be able to see and assign a worker and a status to the various steps of the building process. There will also be a detailed inventory list that will allow me to see what items need to be reordered, as well as a sold projects page where I can keep track of client information.

- A full-stack CRUD application built with React and ASP.Net Core Web API.
- SQL database/HttpClient used for external API
- React bootstrap used for styling.

MUSIC PERFORMANCE AND INDUSTRY (2001-CURRENT)

ARTISTS

- Brantley Gilbert - 2014-present. Band member.
- Lyle Lovett - 2012 . Guitar Tech, Opening Artist.

LUTHERIE

- Golden Guitars - Owner/Founder.
